surface protect systems

SURFACE PROTECT FLOORING SYSTEMS

The surface protect flooring systems are the perfect protection for the soil, the subsoil and the flora, providing comfort and safety. There are numerous applications in construction, gastronomy and for events, for example as lawn covers, event flooring, hall floors, road surface and path fortification, right up to industrial, temporary, heavy-duty work platforms and access roads.

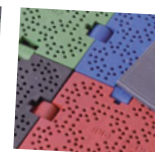

EVENT-GRIP®

Puts your event on firm footing –
and your guests too!

EVENT-GRIP® adapts flexibly to the subsurface, is heavy-duty and has a multitude of uses. It is especially well-suited for lawns, sand and soil, offering perfect protection for the subsurface for events.

EVENT-GRIP® is weather resistant, durable and can be driven on for short periods by lightweight equipment/vehicles. Quick and easy to install, EVENT-GRIP® can be walked on immediately, is slip-proof and provides secure footing. It gives guests and visitors secure footing and comfort, provides safety in the rain or mud, and is very easy to use for wheelchairs and prams.

EVENT-GRIP® is delivered in ready-for-use slabs of 1 m² and is available in black, red, green, blue, white and grey.

EXTREME-GRIP®

The ground protection for extremely heavy loads.

As an easy to lay ground protection, EXTREME-GRIP® flooring systems allow for quick, temporary and/or flexible access to work areas and roadways. EXTREME-GRIP® ground protection systems are efficient and cost-effective.

EXTREME-GRIP® is available in three versions: light, strong and heavy. The different EXTREME-GRIP® products are selected depending on the requirements, application and level of loading. They minimise high recultivation costs and damage to property.

- **EXTREME-GRIP® light is quick and easy to lay. Due to the circumferential rebate groove, the individual slabs are easy to interlock. The slabs are flame resistant and have high resistance to chemicals.**
- **EXTREME-GRIP® strong is a heavy-duty, temporary ground protection. It can be driven on by trucks of up to 40 tons.**
- **EXTREME-GRIP® heavy are large-size, non-slip and elastic terrain slabs for the heaviest equipment and work platforms. They are for both temporary and longer-term use. The slabs can be loaded up to 1000 to/m².**

ERGO-GRIP®

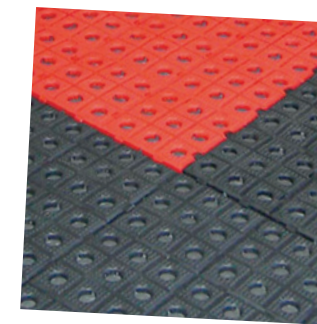

The ergonomic floor at your worksite.

The ERGO-GRIP® ergonomic flooring provides safety and comfort at work. On smooth and slippery surfaces, ERGO-GRIP® ensures safe and non-slip footing.

As worksite flooring, ERGO-GRIP® has countless possible applications – from the bar dispenser up to protection against slipping and dust by industrial machines.

ERGO-GRIP® is perfectly suited for indoor and outdoor areas. The floor slabs insulate against the cold, are weather-resistant, water-permeable and, to a great extent, chemically resistant.

ERGO-GRIP® is available in black and red. For instance, the red design can be used to easily and reliably identify protected areas.

PROTECT-GRIP®

The ideal protection of subsurface against wear in
any weather – short-term or permanent.

PROTECT-GRIP® adapts to the natural subsurface and is therefore versatile in its uses as a permanent, temporary or even mobile ground protection.

Especially well-suited for barrier-free access to sand beaches, as permanent or temporary lawn protection and for the fortification of meadows, it is used for dike construction, for natural road surfaces and paths.

PROTECT-GRIP® provides extensive protection against burrowing animals, protection against erosion and stabilises the subsurface at the same time.

PROTECT-GRIP® is available in three versions: light, strong and flex.

- **PROTECT-GRIP® light reinforces and protects grass-covered areas against compacting under loads and against burrowing animals.**
- **PROTECT-GRIP® strong is very well-suited for higher loads like, for example, lawn parking lots, as access paths, for permanent as well as temporary use. The structure and material combination can accommodate high loads and distribute them over the surface area.**
- **PROTECT-GRIP® flex provides safety against slipping and are comfortable for people and animals to walk on.**

CONTACT

veréal is the exclusive distributor for LOGIS products in France and Benelux. For further information, please contact:

veréal S.A.
5, rue des Mérovingiens
L-8070 Bertrange
